

Cortech Developments

Job Title: Quality Assurance Testers
Department: QA
Location: Brook House Farm, Withers Lane, Cheshire. WA16 0SG
Reporting To: Head of Development

Introduction to Cortech Developments

Established in 1992, Cortech Developments specialise in software integration solutions for smarter building, fire and security systems. We have a proven track record in delivering software development and integrated system solutions for high security environments and critical infrastructure.

Our core product is the Datalog Security Management System. Datalog is a modular based software suite that exists as a single or multi user Graphical User Interface providing local and remote site monitoring and control for a single site or for multiple sites. It is available in many language translations and can be utilised in a range of applications using TCP/IP network technology. Our solutions are deployed in some 27 countries around the globe in key sectors such as Government, Military, Prisons, Police, Custodial, Utilities, Transport, Healthcare, Education and many more besides.

Job Brief

Two exciting positions have become available for full-time Quality Assurance Testers based in Knutsford. The successful candidates will earn in the range of £20,000-£35,000 dependent upon experience.

We are looking for two self-motivated and enthusiastic people who are ready for the next challenge in their career. The candidates will work as part of a close-knit team performing testing and reporting activities on a range of software products and interfaces, including performance tests to 3rd party hardware and software.

Role Requirements

- Experience as a QA tester or similar role
- Familiarity with Agile frameworks
- Keen Interest in technology (past and present)
- Proven ability to document and troubleshoot errors
- Industry Certification BCS\ISTQB Testing Foundation Certificate is desirable
- Testing Activities, Requirements Reviewing
 - Test Execution
 - Test Case Creation
 - Defect Reporting
 - Factory Acceptance Testing
 - Using Test Tools and Test Management (e.g. JIRA, Smart bear, Bugzilla, Selenium, Test Rail)
- Experience of systems configuration and testing (software, hardware)
- Have an aptitude for problem solving along with a systematic approach
- Being a good communicator is a must as you will need to be able to discuss issues with developers, our support team and customers.

Role Responsibilities

- Create tests to verify functional, regression and non-functional acceptance criteria.
- Test execution and test report logging using the appropriate test management tools.

Cortech Developments

- Take responsibility for ensuring that defects are identified and managed. Collaborate with all stakeholders to deliver software releases on time and to the required quality standards.
- Review user manuals, specifications and make recommendations where necessary to improve user experience.
- Work to planned deliverable milestones, able to update peers on progress, seeking help and advice where needed.
- Keep up-to-date with current technology trends and advancements such as virtualisation, communication technologies etc.
- Any other duties (guidance and supervision provided where necessary) as part of the Quality Assurance and testing department.
- Setup and configure hardware for testing

Why Should You Apply?

- The chance to join a well-established company based in a rural setting with easy motorway access and ample parking.
- The opportunity to become part of a hardworking, supportive, and inclusive team.
- To showcase your knowledge and experience.
- Make a positive contribution to a world class product.
- The company is committed to continuous training with access to online courses and specific training for testers.
- To join a successful UK based software company who specialise in solutions for smarter buildings and secure environments.
- We have a fantastic track record in delivering high quality solutions throughout the UK & globally for some of the most prestigious buildings and environments in the world.
